AMCO PLASTEEL® SHELVING

Specifications

SHELVES

Shelf frames are constructed of .0475" thick 1" O.D. steel square tubing. Frames of 60" long shelves have an additional tube welded longitudinally onto the center of the frame. A square tapered 1-3/4" high steel collar is welded at each corner of the frame. Shelves are constructed of high density polyethylene structural foam and steel parts are covered with hard baked grey plastic resin coating. Top perimeter includes a beveled marine edge.

POSTS

Posts are constructed of .065" thick square tubes with notches on every 2" of each corner. A nylon cap is installed on the top of the post. The leveler on the bottom of the post has a 7/8" hex head and a 3/4" threadless shoulder to eliminate deposits of mop strands and broom fibers.

ASSEMBLY

Each shelf comes with four nylon tapered collets that fit securely within any of the notches on the post. Posts are connected to the tapered shelf collars without the need for additional tools or hardware.
