## The Economics of Ergonomics

No doubt, as a Material Handling professional, you've already had to cope with economic, operational and staffing difficulties from work-related injuries. These statistics from OSHA and health publications show you are not alone.

- Each year, 1.8 million U.S. workers report work-related ergonomic disorders – 600,000 of which require taking time off for recovery
- Ergonomic disorders account for more than one third of all lost-work injuries and illnesses
- Total direct costs for occupational ergonomic disorders are estimated at \$50 billion

What's more, these figures are expected to rise dramatically due to the aging workforce and escalating healthcare costs. The use of ergonomically designed equipment, like our Adjustable Ergonomic Steel Table, will go a long way to protect the health of your workers – and the bottom line of your business.
