SPECIFICATIONS

The shelving design shall incorporate multiple trusses running lengthwise in addition to a truss on each end of the shelf. This design shall provide for a rigid framework to minimize deflection under load, and to allow for uniform weight loading of up to 1250 lbs per shelf. Each shelf shall have a minimum of 4 trusses running the length of the shelf. The outer trusses shall be of a vertical design. The intermediate and end trusses shall be of a serpentine design.

The shelving shall be fabricated of C1006 Plating Quality Carbon Steel or Stainless Steel. The shelf deck shall have a raised edge on all 4 sides, a minimum of .200" high. Running the length of the shelf shall be 2 die-formed marine edges, and on the ends the top rod of the truss shall be raised above the shelf deck. Each shelf shall have wires on 1" centers running front to back. Perpendicular to those wires, there are additional support rods running the length of the shelf. Shelves up to 60" support up to 1,250 lbs of uniformly loaded weight.

Digital posts are 1" round tubing with .065" (16 gauge) thick walls made of plating quality cold rolled steel having grooves spaced 1" apart with embossed numbers.
